GROUP

Fully Automated Vertically Rising Acoustic Partition Systems

This CPD seminar introduces fully automated vertically rising acoustic partition systems and explores their role in creating flexible, high-performance spaces. The session explains how these systems are designed, specified and integrated within a variety of building types.

Course Content

- Design principles and system capabilities
- Key features and performance benefits
- Structural and building interface requirements
- Acoustic performance and compliance criteria
- Finishes and aesthetic options
- Health, safety and environmental considerations
- Maintenance requirements
- Unique applications, including stepped or sloping ceilings and floors
- BIM integration and coordination

Duration

35-40 minutes

CPD Resources

You will receive supporting technical information, including handouts and an Acoustic Checklist PDF.

Where we're Based

Style operated nationally, with offices in Dorset, London, Leicester, Manchester and Stirling. Each location is home to a dedicated management team committed to mentoring and supporting apprentices as they develop.
