## About Style

We specialise in delivering tailored acoustic solutions that enhance both the aesthetic appeal and acoustic performance of interior spaces. Working closely with leading UK and European manufacturers, we offer a comprehensive range of wall, ceiling and bespoke sound control systems to suit any environment.

Our team supports designers, architects and contractors from concept through to completion — ensuring every project achieves the perfect balance of design, functionality and acoustic comfort.

# Acoustic Wall Panels

Our acoustic wall panels are engineered to reduce noise reverberation and enhance sound clarity, supporting your vision for balanced, functional spaces. By absorbing unwanted noise, they create environments that promote focus, communication and wellbeing, key factors in modern building design.

Available in a range of finishes, colours and profiles, the panels integrate seamlessly into any interior aesthetic, allowing you to meet acoustic performance targets without compromising your architectural intent.

# Acoustic Ceiling Panels

Our acoustic wall panels control noise and reduce reverberation, creating calm, balanced spaces where sound enhances design. By absorbing unwanted noise, they improve focus, communication and wellbeing, supporting productive and comfortable environments.

Available in a range of finishes, colours and profiles, they offer design flexibility for both feature walls and subtle acoustic treatments, combining high performance with refined aesthetics to suit any interior scheme.

# Acoustic Timber

Our acoustic timber solutions combine the natural beauty of wood with exceptional sound absorption to create spaces that feel warm, refined, and acoustically balanced. Designed to reduce noise reverberation and enhance clarity, they bring both texture and tranquillity to any interior. Available in a variety of slatted, perforated, and veneered finishes, our timber systems deliver the perfect harmony of craftsmanship and performance, offering designers a sustainable, elegant way to achieve outstanding acoustic comfort.

## Our Design Service

Our in-house design team supports you from concept to completion, ensuring every acoustic solution fits the space perfectly. We work closely with architects, designers and contractors to create detailed drawings, visuals and material specs that bring ideas to life. Whether blending panels into an existing design or creating bespoke acoustic features, we make sure each project delivers the right balance of performance, style and practicality.

## Our Approach

From brief to installation, we work closely with you at every stage. We start by understanding your design goals, acoustic needs and style preferences, then create solutions that fit your vision. Our designers produce clear drawings and visuals, and our project managers oversee everything from production to installation. The result is a well-crafted acoustic solution — delivered on time, on budget, and built to perform beautifully.

## Our Commitment

We're passionate about creating spaces that sound as good as they look. Every project is driven by our focus on quality, craftsmanship and collaboration. From concept to completion, we work closely with clients and trusted partners to deliver the highest standards in design, performance and finish. Whether it's a single feature wall or a complete acoustic scheme, our aim is simple — to create smart, beautifully designed solutions that enhance every space.

# Let's create something **exceptional.**

Every space has its own character — and our wide range of finishes and colours allows you to complement it perfectly. From bold feature tones to subtle, natural hues, our acoustic products can be customised to suit any interior style. Available in a variety of textures, materials, and patterns, each finish is carefully selected to enhance both the visual and acoustic quality of your design.

We also offer bespoke printed finishes in high resolution, with precise colour matching to CMYK and Pantone palettes, allowing complete creative control and consistency across your project. Whether you're looking to create a striking focal point or a seamless integration with existing finishes, we give you total design freedom without compromising on performance.

# Sustainable Acoustic Solutions

Sustainability is at the core of our approach. Our acoustic solutions are manufactured using responsibly sourced and recycled materials, supporting environmentally conscious design without compromising performance or aesthetics. Many of our products are made from recycled PET and low-VOC components, contributing to improved indoor air quality and occupant wellbeing.

We work closely with manufacturers who share our environmental values, ensuring materials align with recognised standards such as LEED, BREEAM, WELL Building Standard, and ISO 14001. From raw material selection to end-of-life recyclability, every product is developed with sustainability in mind — helping you create spaces that perform beautifully and tread lightly on the planet.

## Finishes

Acoustic finishes come in a wide range of colours, textures and patterns, with options for custom colours, prints and sizes to create fully bespoke designs without compromising performance.
